Well, we're back into in-person conferences and I'm hoping to meet some of you there. If you're in the less bridge area. This is Scott Gillespie from plants dig soil. And this is where we practice #RealisticRegenAg, which is the hashtag you can use on your social networks. It's advice without the pitch for a product, because we don't sell any products here. So.

So, what I want to highlight in this newsletter update is irrigated crop update, which is Thursday, January 26th in Lethbridge, Alberta, Canada. And that will be going on. I'll have a booth there and that'd be lots of talks through the days as this conference gets restarted. After a hiatus. So quite a few years.

In February,. Farming Smarter will be having their conference and trade show in Lethbridge again. It's on the 15th and the 16th. It's two full days. I'll have a booth there. And again, there'll be lots of talks updating on what's going on in the. Agriculture in the last bridge area.

Now the big event that I will be at is the ag expo, which is February 28th to March 2nd is three days. I'll have a booth there. It will be along the wall. In the main pavilion near the heritage hall for anyone who is familiar with the facility. So I look forward to meeting a bunch of you there.

In the meantime, you can always check out my course profitable from the start it's self-directed. So you can start at any time you work on it on your own. So you can watch videos. You can work on the stuff on it at any point, but then you can get ahold of me for office hours and extra help at any point.

So that is something you can work on of mine. And of course any time that you're looked at. Or you need help with consulting scouting or paperwork. Please let me know. Consulting: we have anything from a very simple Q and a package which you had to help out with whatever your questions are and we go from there. There's planning, there's field planning, and we and work from there. If you're in my area, we have scouting packages to help you out with your fields. Or just a general farm scouting where we look at the most important or pressing things at the time.

And finally there's paperwork. There is a on farm climate action, funding OFCAF and that's where we can get funding to help you try out some new practices and management. Cover crops or rotational grazing systems. And that cost is something that can be included in the funding so you will get that the money back for that. So I look forward to talking with any of you about that.

And I just want to highlight one other thing. On my website, you'll now see a team page where I have myself and the Aline who's been working with me for a few years now. And Just a quick plug here. If you're, if you're interested in independent regenerative agronomy and have an idea as to how we could work together or maybe you could work on work with me and my company I'm always up for ideas so let me let me know. So this is the update for this month. And I will talk to you again next month.
